-Rishabh Garg(b19107)

DESCRIPTION

1. How to start it?

Search @ChatterBoxxBot in telegram give command "/start ".

"USER CAN ASK IN EITHER TEXT OR IN VOICE @"

2. Approach/functionality and how can you use:

For queries, it first uses <u>pywsd</u>, it will limitized words from sentences, then it will try to search answers from various sources as mentioned...

Basically, we have divided the bot into 4 Parts:

- a. Normal chat: Hi/hello/bye/who are you?
- b. Coding related queries:

Functionality: It basically returns the result from StackOverflow.

<u>Implementation</u>: We have implemented it using google module of python and return the first result after google search.

How to use it? : Just write "!code <your query> "

We will return you a StackOverflow link!

c. Weather.

<u>Functionality:</u> It basically returns the weather conditions from AccuWeather.

Implementation: We have implemented it using AccuWeather API.

How to use it?: Just write "!weather <city name> "

We will return you the temperature of the city! (Be careful! We are not so rich to buy AccuWeather subscription, only 50 queries supported per day)

d. College related queries:

<u>Functionality:</u> It basically returns you answers which we scraped from IIT Mandi website and Wikipedia and sometimes asks you whether you want answers from online resources like Facebook and Quora.

Implementation: We have collected data from various sources.

How to use it? : Just type your query!

(Sometimes it will ask your permission if you want answer from online resources, if you want type, "YES")

We will return your answer 3.
